## ENHARMONICS

Today, in musical notation and tuning, an enharmonic is a note that is equivalent to some other note, but named differently.

**Fig. 1 - For example, F# and Gb are enharmonics. The two notes have the same pitch but are represented by different letter names and accidentals, they are enharmonic.**

F#  
Gb

(4th String/2nd Fret)

The key signature of a piece of music tells you which notes are sharp and flat.

**\* Enharmonic equivalence is not to be confused with octave equivalence.**
